2009	434 beds and places
Surface area	Construction costs
52,786 m ²	92 M€
	Location
	Vesoul

The Haute-Saône Intercommunal Hospital is located in the Haberges district in the heart of a 15-hectare wetland park bordering the Lac de Vaivre bird sanctuary. This new facility features three different styles : a serenely domestic side facing the town, an industrial façade on the red concrete, metal-panelled theatre and clinical support block and logistics platform, and the protective curved zinc wall of the office and treatment block, which faces the

ring road and blocks out noise pollution. In addition to the quality of its sculpted façades, the new facility provides a space which is easy for visitors to understand as soon as they arrive. A clear structure, a series of transparent surfaces, visible vertical and horizontal pipes, an unprecedented focus on signage : all these elements combine to create a simple, optimised living and work space.
