Competition

2007 (winner, suspended project)

Completion
2007

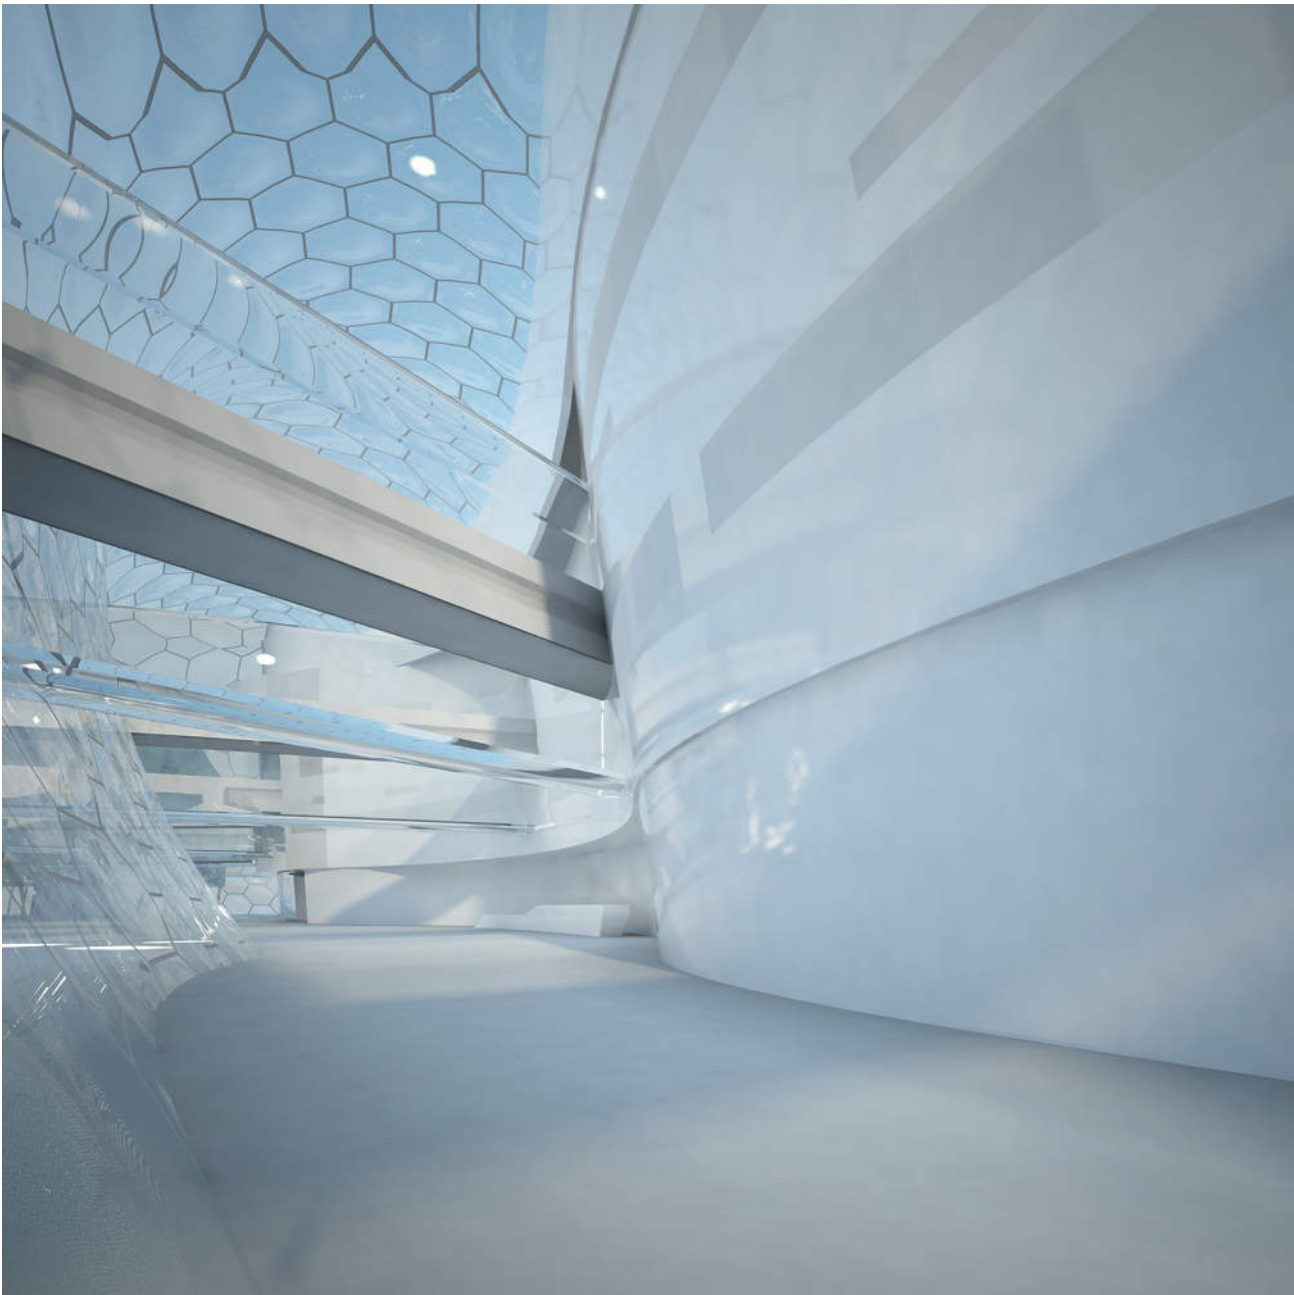

Surface area
53,000 m²

Capacity

250 beds and places

Location

Kyiv, Ukraine

Children's Hospital of the Future, Kyiv, Ukraine

An international architectural competition was launched by the Foundation «Children's Hospital of the Future», chaired by Mrs. Yushchenko (the wife of the President of the Republic of Ukraine), whose mission is to provide an institution that specializes in the care of infants and children with cancer. Located in the heart of a wooded park of 10 hectares, the project is a synthesis between a

strong functional organization and a spatial arrangement in the landscape combining traditional construction principles (wood and oxidized copper on the ward fingers) and hi-tech (ETFE self inflatable membrane for the central gallery). The medical functions are placed behind the central gallery allowing the reception, accommodation and care of the children, views over the park.
