# Extension of the General Hospital in Sens, France

The extension of the General Hospital of Sens is welcoming the Maternity, the Emergencies, a Hemodialysis sector and a medical center. The project combines these programs into a whole coherence. The project is defined by its simple, readable and accessible

form, highlighted by the fresh colors of its courtyards. Each program has its own entrance, and the whole is connected to the existing building on each level. Finally, the Sens Hospital Center has a real facade over the city.
