Competition	Capacity
2002	560 beds and places
Completion	Construction costs
2009	98 M€
Surface area	Location
71,000 m ²	Arras

The Arras General Hospital project sets the standard for a new generation of hospitals, combining rational design with spacial quality – a “network hospital”, with a logistics organisation made possible by integrating new information and communication technologies (NICT); a “smart hospital” with a system of dual-skin façades providing

passive solar input and natural ventilation; and, finally, a “hospital as a living environment”, with splendid views looking out over the grounds, the patios and the lakes, with a highly innovative approach to hospital room design, favouring the relationship between the healthcare personnel and the patient.
