Energies (Energy)

Competition
2011

Completion
2019

Surface area
67,000 m²

Capacity
350 beds and places

Construction costs
218 M€

Location
Rennaz, Switzerland

Hôpital Riviera-Chablais, Vaud-Valais, Rennaz, Suisse

The Swiss cantons of Vaud and Valais decided to build a communal hospital, an unprecedented event in the history of Switzerland. The village of Rennaz was chosen as the location for the hospital, due to the nearby motorway infrastructure as well as its geographical location which symbolises the union between the two cantons. The hospital is to be a horizontal layer on three levels so as not to interfere with the height of buildings in the neighbouring village. It fits harmoniously into the landscape, nestling on

the site's natural topography. The accommodation is concentrated in a single unit on the top floor crowning the building. It is made up of inward looking treatment units overlooking gardens protected from road nuisance while opening out onto the wide open landscape. The rest of medical activities are concentrated on the first two floors, encased in an outer skin of protective, reflective glass.
