

Hoplite, modular deployable bio-contained intensive care complex

Client
UNIHA

Selection method
Competition

Team
Groupe-6 (Architect) - IMeBio
(Construction firm, Lead consultant,
Medical MEP, Réalisation des containers) -
ASPIDA (Construction firm, Structures
déployables confinées) - ERINHA
(Consultant) - Life Ingénierie (Engineering) -
GL events (Construction temporaire,
génération puissance, logistique,
installation)

Completion
2020

Surface area
1,800 m²

Hoplite, modular deployable bio-contained intensive care complex

Winner of the UNIHA call for projects launched at the initiative of the Architecture and Engineering Committee of DG_CHRU and the Association des Ingénieurs Hospitaliers de France!

In response to the Covid crisis, the consortium made up of Groupe-6 architects, the innovative industrial companies Aspida & Imebio, supported by the Mérieux Institute, with ERINHA, European Research Infrastructure on Highly

Pathogenic Agents, Life Ingénierie and GL events, has designed an innovative bio-contained intensive care complex, deployable in 20 days. This hybrid concept brings together containers and deployable structures in a minimal footprint that can be easily stored and moved. The scalability of its modular design is threefold: in capacity (expandable), in safety level (pathogens), and in equipment (possibility of adding technical modules, imaging ...).
