

# Restructuring of the scientific research units in the Campus Lyontech - La Doua, Lyon, France

**Client**

Université de Lyon

**Selection method**

Design, construction, installation, maintenance (CCAEM)

**Team**

Groupe-6 (Architect) - GCC (Construction firm, Lead consultant) - Supermixx (Associate architect) - Tectus (Associate architect) - Egis Bâtiments (Engineering) - Cofely (Maintenance)

**Competition**

2015

Surface area  
72,000 m<sup>2</sup>

**Capacity**

12 buildings in first step ( about 72000m2 SHON) and other conditionnal stepss carrés SHON environ)

**Location**

Lyon

# Restructuring of the scientific research units in the Campus Lyontech - La Doua, Lyon, France

The La Doua science campus is made up of two clearly identifiable hubs differentiated by their history, their form, and their architectural style: to the west is the UCBL; to the east is INSA. The renovation project embraces this clarity, showcasing the existing architecture without making the non-renovated buildings look outdated. Airy

and light, the new façades fit like tailored coats. The green central axis embodies the values of the LyonTech-La Doua eco-campus: simplicity, sharing, sustainability and user-friendliness. Highlighted and magnified by the accumulation of new functions at ground level, it becomes the emblem of the eco-campus and its quality of use.
