Competition	Capacity
2017	472 beds and places
Completion	Location
2023	Reims

# Extension of the University Hospital Centre of Reims

Our project was selected as the winner of the competition for the first phase of the new Hôpital de Reims. This 472 beds, modern “Open Hospital” will house all the components of the technical platform (operating room, interventional imaging and cardiology, imaging, resuscitation, intensive care and continuous monitoring), as well as the functional consultations and explorations of

the disciplines located in the new building. Its architecture, sober and unitary, reveals its composition in strata and the 3 functions of the program: the base, rectangular seat of the technical platform; “Floating” above it, underlined by a large caesura, the square of the accommodations and the thin volume of the offices. The facades dress these volumes with a precise and light writing.
