(Engineering)

Competition

2004

Completion

2010

Surface area

31,000 m²

Capacity

275 beds and places

Construction costs

58 M€

Location

Rochefort

Rochefort Hospital is a typical example of a generation of medical centres providing an appropriate response to a complex programme, combining harmonious integration into the site, efficiency and hospitality. The new hospital was designed to better incorporate new hospital legislation and technologies (MRI, multimedia connections

for patients). The future medical complex will include a research laboratory, an elderly person's hospice and, potentially, a nursing college. Flexibility and scalability are key to achieving a sustainable and responsible medical centre.
