Jean-Paul LAMOUREUX (BET acoustique) -
ALTO Ingénierie (HQE)

Competition
2019

Capacity
416 beds and places

Location
Saclay

Groupe Hospitalier Nord-Essonne - Hôpital Paris-Saclay, Saclay

The new Paris-Saclay Hospital, which brings together GHNE activities, will open its doors in 2024 on the Saclay plateau. With a polybloc, resilient and scalable structure, it is composed of 3 major elements: its **outpatient center** gathering hall, consultations, associated functional explorations and day hospitals, services to the population; its **medical-technical center** gathering emergencies,

imaging, operating room, obstetric room and critical care, and its **accommodations**. The outpatient centre, on the ground floor level only, offers a good capacity for scalability and extension. The shape of the project, its 2 main volumes separated by a large transversal caesura, forms a very legible and structuring organization on the scale of this evolving neighbourhood.
