# Saint-Quentin-en-Yvelines Police Station, Elancourt

First stone of the renewal of the Plaine des Sports, the new police station in Saint-Quentin-en-Yvelines offers the opportunity to strongly and symbolically mark the urbanization of the district. Its urban form is shaped by its alignment with the Boulevard Grégory, and characterized by an composition of simple and parallel volumes, widely

open or voluntarily protective according to their orientation and position. The sloped plans of the roofs break with the horizontality of the site and the surrounding frame. They contribute to the dynamics of volumes and strengthen the north/south orientation of the project. The building is designed to achieve E3/C2 performance levels.
