2020

**Surface area**

25,000 m<sup>2</sup>

**Capacity**

1 500 people

**Location**

Grenoble

# Intencity Schneider Electric, Grenoble

Dedicated to welcome the direction of innovation of Schneider Electric France, the building is located on the Presqu'île Scientifique, the new scientific cluster which brings together major public and private actors (CEA, CNRS, Grenoble INP...) in a dynamic ecosystem anchored in the territory and recognized worldwide. Interface between city and nature, with an exceptional situation between the river Drac and Isère, the building stands out as a major element in the urban whole. Dressing its rigorous volume, his precious skin consists of an anodized aluminum cladding bronze aspect, asserting the prestige and excellence of the premises it houses. Its four volumes placed at right angles along the avenue des Martyrs come alive on the ground floor, while its unit facades reflect the equal treatment offices, erase the variety of interior spaces

for the benefit of the strength of all. Its "endless staircase" becomes a real living space. It includes cafeterias, meeting rooms and informal collaboration areas that open onto the extraordinary landscape: the garden, the river, the mountain as a background. Riverside, the garden, contained and protected by the frame, is dedicated to the corporate life. AWARDS : Worldwide reference LEED Platinum – Pyramides d'Argent FPI 2019 – Corporate real estate and low-carbon awards – Nominated for the BIM d'Or 2020 award. See also :
