(Acoustical studies)

Surface area
55,500 m²

Construction costs
63 M€

Location
Strasbourg

Strasbourg Exhibition Center, Strasbourg

An exhibition center downtown

The project is structured around a large halle, divisible but thought in its layout for a unique exhibition. The separatives are intercalated through a large overall plan that works without any change of networks or other modification of implementation. The architectural rhythm of the hall, underlined by the broad beams that structure

and illuminates it, initiates a north-south modernity that punctuates the public space. The forecourt is a part of this model with a provision for a supply of goods and services, and provides appropriation of the public space in any circumstance. Transparencies and continuities interior / exterior, allowed through the entrance of the space event, contribute to the overall readability of the space.
