Selection method Public private partnership (PPP)		Surface area 108,700 m ²	Location Corbeil-Essonnes

Sud Francilien Hospital, Corbeil-Essonnes

This metropolitan hospital, outstandingly located at the confluence of three major transport routes, asserts itself in the landscape as a coherent complex on a human scale. Remarkably large, it has 1,000 beds divided between four independent clinics. Its strata-like layout on six floors follows a modular plan arranged around large inner courtyards, offering many opportunities for transparency

and natural lighting. Protected from the noise, it stretches kinetically along the Francilienne motorway to the south. The architecture is more domestic on the northern side, opening onto the trees in an urban park; the patient rooms above the streets serving the different sections of the hospital also face towards the park.
