Agadir General Hospital

groupe-6

Agadir, Morocco / 2017

AN INTERIOR NAVE WHICH DISTRIBUTES AND IRRIGATES THE HOSPITAL

The architectural project is composing a set at an urban scale, linked to its landscape and its urban environment, present and future. As a part of the dynamics of the urban development of Agadir, the implementation of the hospital preserves a potential expansion on the site. The Chaâba (Wadi) which limits the site to the north, is part of a large landscaped park crossed by a green belt. A large square, shaded urban space, precedes a monumental reception area, in the heart of the building, installed between the mother-child centre, accommodations and consultations. A high interior nave with subdued light and temperate climate, is refreshed by a garden. It is punctuated by receptions areas and fresh patios. In the north and east, the large park is both a landscape, a horizon and a walk.

Client: Ministère de la Santé | **DPMA:** Ministère de l'Equipement, du Transport et de la Logistique, Direction des Equipements Publics | **Type of project:** Construction of the University Hospital of Agadir | **Selection method:** Architects/engineers competition | **Team:** Agence Fikri Benabdallah (lead consultant, architecture) - Groupe-6 (architecture) - Agence Rachid Andaloussi (architecture) - CID and ARTELIA (engineering) | **Competition:** 2014 | **Delivery:** December 2017 | **Net surface area:** 95,000 sqm | **Number of beds:** 841 | **Construction costs:** MAD 993 000 000 (2014 value)
