Nord Deux-Sèvres Hospital

groupe-6

Faye - L'Abbesse, France / 2018

A COMPACT VOLUME, A HORIZONTAL DESIGN MADE UP OF FUNCTIONNAL STRATA

The new Nord Deux-Sèvres Hospital takes place in an agricultural site in the middle of the bocage Poitevin. Compact, designed on a square grip, the project is seen as the superposition of horizontal functional nappe.
It consists, from bottom to top, of:
- A mineral base with gabions on the south facade: in the slope of the terrain, it hosts the logistics and opens onto the courtyard of delivery;
- A horizontal incision on the facade, underlined by a colonnade, and a large terrace belvedere accessible to patients. This is the level of the lobby, relaxation areas and outpatient areas: consultations, imaging and emergencies;
- Two top levels which form a homogeneous mineral mass, as an ondulating skyline. Dressed in clay brick, the volume is pierced with large «windows» that modify the scale of perception.

Client: Centre Hospitalier Nord Deux-Sèvres (CHNDS) | **Type of project:** Design-construction of new Hospital Nord Deux-Sèvres in Faye-L'Abesse | **Selection method:** Design-Construction | **PMA:** ARTELIA | **Team:** Bouygues Bâtiment Centre Sud-Ouest (general contractor, lead consultant) - Quille Construction (co-contractor) - Groupe-6 (architect and quantity surveyor) - INGEROP (engineering) - Intégral Concept (HEQ) | **Competition:** 2014 | **Delivery:** 2018 | **Net surface area:** 27,000 sqm | **Construction costs:** € 52,69 M excl. VAT (2014 value)
